

Conflex Sherwood Shrink Wrapper Model CW-160 Item E2368

From Conflex web site Item E2368 is similar

The CW Modular Series of Lap Seal shrink wrappers features high speed sealing and a rotary style seal bar are all part of Conflex's horizontal form fill and seal product family. The versatility of the CW Modular Series of wrappers, is based on a building block design that allows it to be assembled with a variety of modules that reflect individual customer's needs. These modules include an array of infeeds, seal bar options and electronics packages that allow a customer to customize their machine based on their needs and budgets (and sometimes their wants). End users appreciate the economies of using expensive technology where appropriate rather than throughout the machine. The result is a customizable / fair priced line of machines rather than a "one size fits all" approach. The CW Series of machines can be built quite simply using standard mechanical assemblies and relay logic or high tech using state of the art electronics and servos.
